The task at hand was the challenge of creating a proposal for a museum exhibit. As a group, we created two visuals to help the proposal show exactly how we wanted the exhibit to be. The visuals were a timeline and a layout of the exhibit, to show what the exhibit will look like. The history of technology is a complicated subject and each breakthrough was crucial to the fruition of the next. The group wanted to design an interactive exhibit that gave the essence of walking through time. The exhibit will be along the west side of the building and will follow a pattern of time being directly correlated with your distance down the hallway. It is almost like an interactive timeline that continues to hold chronological order. While the booklet and visualizations will be a part of the real proposal, the website will include deeper background information into the history of the cell phone. The actual exhibit will consist of an actual physical item and a short excerpt summarizing the item and its relevance.

Throughout our marketing research many believed the realm of cell phone will be one of the fastest growing markets in the world. This makes our point in history very crucial to the outcome of this future. Cell phones are a combination of many tools and uses and what we do to add and revise from here will create our future communication devices. The field is extremely malleable so what people want to see in the future will give us a very good look into what the actual future may hold.
